Abstract

Since the 1970s, hundreds of *khipus*—Andean knotted-string recording devices—have been named after academic researchers. This practice disassociates individual *khipus* from their places of origin and reifies scientific inequity. Here, a new convention of the form KH##### (e.g., KH0125) is proposed, which we believe represents a more neutral, direct, and accurate nomenclature. The change is implemented in the Open Khipu Repository (OKR), the largest *khipu* database.

Keywords: *khipu (quipu); nomenclature; databases; renaming*

Resumen

Desde la década de 1970, cientos de quipus —implementos andinos de registro de cuerdas anudadas— han recibido el nombre de investigadores académicos. Esta práctica disocia los quipus individuales de sus lugares de origen y contribuye a la desigualdad científica. Aquí se propone una nueva convención de la forma KH##### (por ejemplo, KH0125), que creemos representa una nomenclatura más neutral, directa y precisa. El cambio se implementa en el Open Khipu Repository (OKR), la mayor base de datos de quipu.

Palabras clave: *khipu (quipu); terminología; bases de datos; renombramiento*

In 2004, the Mesoamericanists Maarten Jansen and Gabina Aurora Pérez Jiménez noted a striking disjunction in works on Mexican pictorial manuscripts. Although scholars more broadly appeared to have readily adopted more accurate names for individual signs, in step with ongoing decipherments—forgoing the so-called toothache glyph for its actual meaning (“accession”), for example—the same could not be said for the codices themselves. “The documents in question often are named for collectors, politicians, scholars, or institutions of the ‘Western’ world or the

national elite,” wrote Jansen and Pérez Jiménez (2004:267), adding that they are “far removed from the region from which they originated and to which they refer.”

Examining the corpus of *kipus*—Andean knotted-string recording devices—we cannot but share their concern some two decades later. Of the 1,386 surviving examples in collections (Medrano 2021), more than 600—those included in the Open Khipu Repository (OKR Team 2022), the largest existing compilation—are named after the modern scholars who cataloged them. That more than 90% of OKR *kipu* entries are attributed to non-Peruvian researchers is itself a reflection of both historical and ongoing disparities in geographic proximity, research funding, and privileged access to data caused by the social and cultural capital accumulated via prestigious university membership, among other factors. In addition to disassociating specimens from their locations of origin, current *kipu* naming conventions also commit a linguistic disservice, replacing the Quechua term *kipu* (also *kipu* or *quipu*) with the names of (often) non-Andean researchers.

In this report, we follow Jansen and Pérez Jiménez’s (2004) example in proposing a new naming convention for the 630 Inka-style *kipus* in the OKR, formerly known as the Harvard Khipu Database. We believe that the new nomenclature, of the form KH#### (KH[ipu]{0001, ..., 0630}), offers a more neutral, recognizable, and conventional terminology going forward. The proposal falls within the broader initiatives of the OKR Advisory Board, an independent consultative body of which the coauthors are part. Deeply concerned with the legacies of neocolonialism and abusive practices in *kipu* studies, we have issued a series of statements about ethical research norms (OKR Team 2022) for the purpose of nurturing a discipline that is inclusive, accountable, and accessible to all. In our view, a new *kipu* nomenclature is an important step in ensuring such a future.

The State of *Khipu* Naming

The 630 *kipus* in the OKR are currently named using a two-part alphanumeric code. Take, for example, AS211: the first two characters, AS, abbreviate Ascher, the surname of its catalogers (who themselves debuted the convention; Ascher and Ascher 1978:3–4). The subsequent digits imply that this *kipu* is the 211th that the Aschers recorded, although because of inconsistent labeling practices, the number assigned to each *kipu* does not reflect the cumulative tally. More recent recordings have resolved this issue: JC005, for example, is indeed the fifth cataloged by Jon Clindaniel (2019).

At the same time, not all the labels are those originally imposed by the respective researchers. For instance, 59 *kipus* published by Proyecto Quipu, a Peruvian initiative, were originally reported using museum accession and National Registry numbers; however, they were subsequently relabeled with the initials (HP) of Proyecto Quipu’s director, Hugo Pereyra Sánchez (2006), when they were entered into the OKR between 2007 and 2012.

Other OKR *kipus* have atypical names, often to denote multiple studies by different researchers. The Aschers, for example, appended a shorthand of the previous scholar’s surname to their own description: *kipu* VA16636 in the Ethnologisches Museum, Berlin—initially labeled “Quipu 9” by the early twentieth-century researcher Erland Nordenskiöld—was subsequently dubbed AS140/N9 by the Aschers (1978:903–915). Confusingly, Gary Urton instead opted to replace the

previous initials with his own and then to prefix the numerical code with a “1” upon restudy. As such, AS140/N9 became simply UR1140; AS052 entered the OKR as UR1052. Table 1 totals the *kipus* in the OKR as of the writing of this report, grouped by their respective catalogers and alphabetic codes.¹

Table 1. Khipus in the OKR, Grouped by Cataloger.

Justifications for the New System

Khipus Should Not Be Named after Modern Academic Researchers

Jansen and Pérez Jiménez (2007:xiii) have described existing naming practices for Ñuu Dzaui pictorial manuscripts as being part of an ongoing “colonization process”: their solution was to “find names directly and unequivocally related to [each] document.” The Andean case is problematic in that *khipus* remain only partially deciphered, and so we cannot yet confidently assign designations to individual specimens that reflect their contents. This reality makes a more neutral and unambiguous terminology even more important: forefronting the “*khipu*” designation makes for a more direct and unequivocal identification than at present.

Further, approximately 90% of the more than 800 known publications related to *khipus* are written in English (45.5%) or Spanish (45.6%; Urbizagástegui Alvarado 2014), producing an “international metalanguage” (Jansen and Pérez Jiménez 2004:267) that disassociates *khipus* from Indigenous Andean language groups. The least we can do is instead use more culturally specific terms. The Smithsonian affiliates Gillian Flynn and Deborah Hull-Walski (2001:33) describe the relabeling of ethnographic objects and associated updates to collections databases as important features of culturally sensitive museum curation.

The Existing Terminology Is Ambiguous, Misleading, Internally Inconsistent, and Overly Complex

Explicit defenses of the status quo are lacking. The Aschers (1978:3) aimed for “clarity and brevity” in creating the nomenclature. However, these qualities are hardly exclusive to the current convention, which retains an inherent ambiguity: for the more than two hundred AS *khipus*, it is unclear whether Marcia Ascher or Robert Ascher produced each record, given that they shared a surname and researched together. The final documentation for the 59 HP *khipus* credits Hugo

Pereyra (2006:23) with managing the “project, database, and photography”; Alejo Rojas Leiva with the “measurement and analysis of textile characteristics”; and Maritza Tovar Prado with being Proyecto Quipu’s assistant. Yet the subsequent translation of this data to the OKR omitted the other group members’ names; today’s HP label, according to the Aschers’ definition, implies that Pereyra (and only Pereyra) recorded each *kipu*.

What is ambiguous can also dip into the misleading, as evidenced by the restudied UR *kipus*. Urton’s replacement of AS designations with his own initials obscures previous researchers’ recordings, in contrast to the Aschers’ method of appending the deprecated designation to their own. Urton’s practice also lends the impression that he recorded all the UR *kipus* alone, which is inaccurate. A survey of OKR data reveals numerous updates and observations by Carrie Brezine, the Harvard Khipu Database’s builder and first administrator, who analyzed (and recorded) many of the UR *kipus*.

In addition to the tension between the Aschers’ (appending) and Urton’s (replacing) notations for restudied *kipus*, we note that individual labels have not all been carried through. A *kipu* in the former collection of Óscar Núñez del Prado, once analyzed by Carol Mackey (1970:213) as *kipu* “no. 36,” was registered by the Aschers (1978:351–352) as AS061/MA36 on restudy—a label that persists in the OKR. By contrast, AS167/N15’s renaming as UR1167, despite implicitly recognizing the Aschers with the “leading one,” drops Nordenskiöld’s original record entirely.

Precedents Exist for More Neutral Naming Conventions, Both in and outside Khipu Studies

Among the earliest *kipu* researchers, L. Leland Locke and Erland Nordenskiöld employed simple ordinal labels in the 1920s. Frank Salomon’s fieldwork in the central Andean village of Tupicocha, where some 10 *kipus* are used in an annual civic plenum, is more recent. Because locals do not assign unique names to the *kipus*, Salomon (2004:22) introduced a binomial system: a first term identifies the associated ayllu, and the second the order of observation; for example, M-02 = *kipu* belonging to Mujica ayllu, second observed. In a later study of an assemblage of more than 260 single-cord *kipus* in Rapaz, Salomon and Brezine debuted another alphanumeric code: a prefix (KR; “*Khipu* Rapaz”), followed by three digits roughly identifying each cord’s position; for example, KR025 is the 25th *kipu* from the left (Brezine 2011:10–11). At present, a lack of secure provenience renders such culturally specific names untenable for individual OKR *kipus*,² though our ordinal numbering scheme seems a realistic and attainable middle ground.

More broadly, we find parallel initiatives in museum curation, medicine, and the history of mathematics. Curator-scholar Stephen Gilchrist (2021:25) describes the Indigenous-led renaming of Australian collections as a means of resisting their “intentional anonymisation” by collectors’ names. Mora and Bosch (2010:1500) have called for replacing honorific medical eponyms with acronyms that “convey the underlying features” of complex syndromes. Among mathematics historians, there is renewed interest in using author-forward labels for papyri, clay tablets, and other sources. Thus, the Rhind Mathematical Papyrus, a monumental source of ancient Egyptian mathematics, has also been dubbed the Ahmes Papyrus to recognize the scribe who copied it, rather than its nineteenth-century Scottish antiquarian purchaser. These, too, are instructive reference points.

Implementation

What is entailed in practice? The Open Khipu Repository currently contains an SQLite relational database along with associated metadata. It is publicly hosted on GitHub and is open source, open access, and version controlled. All GitHub releases are archived on Zenodo, with each version assigned a unique DOI. Our proposal entails changes to the database's KHIPU_MAIN table (Figure 1), which stores the data pertaining to each *khipu* as a whole. The KHIPU_ID field is the table's primary key, consisting of seven-digit integers that correlate closely (in ascending order) with the creation date of each record. It uniquely identifies each *khipu* and links its knot, cord, and color recordings across the database's tables. The current alphanumeric names, such as AS122, appear in the INVESTIGATOR_NUM field. Our proposed nomenclature, which updates the OKR investigator numbers, fills a new field in KHIPU_MAIN that we call OKR_NUM.

Figure 1. Changes to the KHIPU_MAIN table in the OKR relational database. A relevant subset of fields is shown.

To map existing names to new ones, the 630 translations were achieved using three principles:

1. The *khipu* groupings in Table 1 were ordered chronologically by initial year of recording: that is, Locke (= LL, beginning 1923), Ascher (= AS, beginning 1972), Urton (= UR, beginning 1994), Pereyra (= HP, beginning 2006), Quave (= QU, beginning 2008), and Clindaniel (= JC, beginning 2016). Thus, LL001 precedes AS001, which precedes UR001, et cetera.
2. Within each group of investigator numbers, the original ordinal listing is respected. That is, AS002 follows AS001, and QU015 follows QU014, et cetera.
3. In 13 instances, duplicate recordings of the same *khipu* by different researchers were consolidated to a single OKR name, with the most recent iteration preserved as the version of record. For instance, when consolidating duplicates AS046 and HP041 into KH0057, we deleted the independent AS046 (the older entry) and preserved HP041 as the definitive record. We modified its INVESTIGATOR_NUM field from “HP041” to “AS046/HP041” to acknowledge the duplicate recordings and then set “KH0057” as its new OKR_NUM.

In addition, four records were removed because they are blank and, lacking accession numbers, cannot be reconstructed with a follow-up visit (see Supplemental Table 1).

We reproduce the key transition points of the OKR naming system in Table 2. Subsequent *kipus* added to the OKR will be appended to the existing list, by agreement of the OKR Advisory Board, using names beginning with KH0631. Crucially, the OKR’s transition to new *kipu* names is an additive procedure: it constitutes a change in emphasis, rather than an “overwriting” of past scholarship. The nature of a relational database allows one to add the new designations to the KHIPU_MAIN table while retaining the former investigator numbers. As such, no information on previous scholars is lost—at least no more than is already lost using the present system. Furthermore, the *kipu* recordings dropped in this naming transition (e.g., the older readings of the same *kipu*) can be recovered by reverting to previous version-controlled iterations of the data.

Table 2. OKR Number Ranges Associated with Existing Investigator Number Ranges.

OKR Names	Existing Names
KH0001	LL001
KH0002 – KH0236	AS001 – AS215F
KH0237 – KH0532	UR001 – UR294
KH0533 – KH0588	HP001 – HP057
KH0589 – KH0607	QU001 – QU019
KH0608 – KH0630	JC001 – JC023

Conclusion

For the OKR Advisory Board, the new KH naming convention is a key facet of our broader efforts to democratize the study of *kipus*, making it increasingly accessible, accountable, inclusive, and collaborative. We see the existing nomenclature as contrary to these aims, given its ambiguity, internal inconsistency, and honorific bent. Even if unintentional, its conveyance of “ownership” of certain data allows expertise in *kipu* studies to continue to be “disproportionately claimed by the global North” (DuBay et al. 2020), thereby eclipsing the rich history of *kipu* research by Andean scholars and others outside the English-speaking world. By no longer rhetorically reproducing these inequalities, the OKR nomenclature is a first step in the process of decolonizing the discipline. We also hope that this proposal can have a broader catalytic effect, encouraging collective consideration of the inequities latent within our research that are often reproduced in our naming practices. In this regard, our Mesoamericanist colleagues have put it well: “Common reflection, we hope, will result in a generally accepted, recognizable, and dignifying terminology” (Jansen and Pérez Jiménez 2004:270). In our view, the Andean *kipu*—the tremendous primary source with which we continue to reckon—deserves nothing less.

Acknowledgments. The authors thank Lisa Trever and Mackinley FitzPatrick for their helpful suggestions during earlier discussions of this work.

Funding Statement. This research received no specific grant funding.

Data Availability Statement. The *kipu* names described here are reproduced in full in Supplemental Table 1. Data recorded from the 630 *kipus* themselves are available from the Open Khipu Repository v2.0.0 (<https://doi.org/10.5281/zenodo.6908343>). For the code necessary to replicate the renaming procedure, visit <https://doi.org/10.5281/zenodo.6908292> (Open Khipu Research Laboratory 2022).

Competing Interests. The authors declare none.

Supplemental Material. For supplemental material accompanying this report, visit <https://doi.org/10.1017/laq.2023.71> (and below). (Supplemental Table 1. Open Khipu Repository Translation Table.)

Notes

¹ The totals per researcher differ from the numbers reported earlier (e.g., 56 Pereyra *kipus* and not 59) due to the consolidation of *kipus* recorded multiple times by different scholars.

² An exception may be modern *kipus* in museums, as with three from Anchucaya (Huarochiri) that were previously correlated with local accounting practices (Hyland 2016:498–504).

Notes

1. Additional names are listed when consolidating several records of the same *kipu*. Thirteen instances were identified of a given *kipu* entered multiple times into the OKR under different names. These are: UR035/AS070, UR043/AS030, UR044/AS031, UR083/AS208, UR126/UR115, UR133/UR036, UR163/AS056, UR176/LL01, UR236/AS181, UR281/AS068, HP035/AS047, HP036/AS038, and HP041/AS046. In other cases, the sequential numbering followed by previous researchers is interrupted. This is the product of consolidating duplicate records (see above); in four instances, denoting *kipus* for which data and/or accession numbers were never entered, precluding their recovery: UR025 (Museum Fünf Kontinente, Munich), UR030 (Carlos Museum, Emory University), UR031A-C (Carlos Museum, Emory University), and AB001 (unknown collection and investigator); and in one instance, reflecting mis-entered data: UR224 (Ethnologisches Museum, Berlin) was subsequently re-entered in the OKR as UR1104/AS104, leaving the UR224 placeholder blank.

2. This *kipu* was not initially entered into the OKR. It is re-introduced here.

3. UR044 (KHIPU_ID 10001012) is an unfinished duplicate of AS031. The more complete UR1031 (KHIPU_ID 1000097) is retained as the canonical version.

4. Two *kipus* tied together. Split into AS063 and AS063B in the OKR, though initially recorded by the Aschers only as AS063.

5. Two *kipu* fragments associated with each other by the Aschers. Split into AS065 and AS065B in the OKR, though initially recorded by the Aschers only as AS065.

6. This *kipu* is duplicated in the OKR as “AS067/MA029” (KHIPU_ID 1000371) and “AS067/MA29” (KHIPU_ID 1000364). The former, which is the most recent, complete version of the record, is retained.
7. The Aschers did not note any museum or collection info in the *kipu*-specific databook entries for AS072 and AS073, though the introductory pages to the databooks list the provenance for these specimens as Rancho San Juan, Ica Valley.
8. Added parentheses to (A) and (B) in accession number, since these are not used in the Ethnologisches Museum catalog; they were subsequently imposed by *kipu* researchers.
9. Added parentheses to (A) and (B) in accession number, since these are not used in the Ethnologisches Museum catalog; they were subsequently imposed by *kipu* researchers.
10. This record pertains to an additional *kipu* described by the Aschers in their notes on AS130. It was originally entered into the OKR as AS130B.
11. Two primary cords looped through each other. Split into AS162A and AS162B in the OKR, though initially recorded by the Aschers only as AS162.
12. Added parentheses to (A) and (B) in accession number, since these are not used in the Ethnologisches Museum catalog; they were subsequently imposed by *kipu* researchers.
13. Added parentheses to (A) and (B) in accession number, since these are not used in the Ethnologisches Museum catalog; they were subsequently imposed by *kipu* researchers.
14. Added museum accession number (previously N/A) from duplicate (UR236) entered into OKR.

15. Split into AS182 and AS182B in OKR, though recorded by the Aschers only as AS182 (the “B” *hipu* is actually a cord with 22 single knots that is attached to the broader grouping of five *hipus* tied together, among which is AS182).
16. Split into AS215 and AS215F in OKR, though recorded by the Aschers only as AS215. The *hipu* is associated with two fragmentary pendant cords with subsidiaries; it is unclear if they are attached to a primary cord. The Aschers believed the fragments were associated but not from *hipu* AS215, originally recording them as F1 and F2.
17. UR023, UR024, UR027, UR028, UR029, and UR057 are six *hipus* tied together. N/As are used here for their accession numbers because the original OKR listing uses “s/n” followed by the letters A through G. Presumably the original researcher assigned individual identifiers to *hipus* that were otherwise *sin números* (without numbers).
18. The accession numbers for UR032 and UR033 appear to be entered incorrectly in the OKR; corrected to TM 4/5446 from TX 4/5446 following confirmation in Hearst Museum online database.
19. Added (A) to museum accession number, since this is not used in the Peabody Museum catalog (it was subsequently applied by a researcher).
20. Incorrect accession number in OKR; corrected to 1924.18.0001.
21. Incorrect accession number in OKR; corrected to 1931.37.0001.
22. UR167 is entered twice in KHIPU_MAIN (KHIPU_ID 1000474 and KHIPU_ID 1000484). However, only KHIPU_ID 1000474 has cord and knot data associated with it, so it is retained as the canonical record.

23. Added parentheses to accession numbers for UR200 and UR201, since the A and B were assigned by Urton. The actual objects have the same accession number.
24. Added parentheses to accession numbers for UR204, UR205, and UR206, since the A, B, and C were assigned by Urton. The actual objects have the same accession number.
25. Added parentheses to accession numbers for UR210 and UR211, since the A and B were assigned by Urton. The actual objects have the same accession number.
26. Added parentheses to accession numbers for UR213 and UR214, since the A and B were assigned by Urton. The actual objects have the same accession number.
27. Incorrect accession number in OKR; corrected to VA47114b.
28. Added parentheses to accession numbers for UR227 and UR228, since the A and B were assigned by Urton. The actual objects have the same accession number.
29. Added parentheses to accession numbers for UR232 and UR233, since the A and B were assigned by Urton. The actual objects have the same accession number.
30. Added parentheses to accession numbers for UR243, UR244, UR245, and UR246, since the A, B, C, and D were assigned by Urton. The actual objects have the same accession number.
31. Appended an “i” to correct accession number following confirmation with Ethnologisches Museum online database.
32. Corrected accession number to MSP 1389/RN 43370 from MSP 1389/RN 43367.
33. Corrected accession number to MSP 1422/RN 43403 from MSP 1422/RN 43404.

34. Corrected accession number to MNAAHP 4202 from MNAAHP.
35. Corrected accession number to MNAAHP 30564 from MNAAHP.
36. The “B####” component of the Dallas Museum of Art *kipu* accession numbers is missing from all QU *kipus* in the OKR. This has been rectified.
37. QU012 was not originally entered into the OKR. It is re-introduced here.
